FIG. 2 is a perspective view of the device of FIG. 1, showing the device in a closed position. The device is a ring-shaped structure with a central opening. The ring is formed by a series of interconnected segments, each having a curved outer surface and a flat inner surface. The segments are joined at their ends by a series of small, rectangular tabs or lugs. The device is shown in a perspective view, with the front and back surfaces visible. The front surface is the outer curved surface, and the back surface is the flat inner surface. The central opening is a circular void in the center of the ring. The device is shown in a closed position, meaning that the segments are joined together to form a continuous ring. The device is shown in a perspective view, with the front and back surfaces visible. The front surface is the outer curved surface, and the back surface is the flat inner surface. The central opening is a circular void in the center of the ring. The device is shown in a closed position, meaning that the segments are joined together to form a continuous ring.

FIG. 4

FIG. 5 is a schematic diagram of a system for monitoring a process. The system includes a process 10, a sensor 20, a controller 30, and a display 40. The sensor 20 is connected to the process 10 and the controller 30. The controller 30 is connected to the display 40. The display 40 displays the output of the controller 30.

FIG. 7 is a cross-sectional view of the ring 1, showing the internal structure of the ring 1, including the inner ring 11 and the outer ring 12. The ring 1 is shown in a cross-sectional view, with the inner ring 11 and the outer ring 12. The ring 1 is shown in a cross-sectional view, with the inner ring 11 and the outer ring 12.
